# INTRODUCTION

## AS Academic Projects (Clone)

### Scope of the document:-

Airtel, officially known as Bharti Airtel Limited, is a renowned telecommunications company that has left an indelible mark on the Indian and global telecommunications landscape. Founded in 1995 by Sunil Bharti Mittal, Airtel has grown into one of the world's largest mobile network operators, offering an extensive range of services that encompass mobile voice and data, fixed-line broadband, digital TV, and enterprise solutions. Headquartered in New Delhi, India, Airtel's influence extends to over 18 countries, solidifying its status as a global telecom giant.

What distinguishes Airtel is its relentless commitment to innovation. The company has consistently been a trailblazer in the industry, introducing transformative technologies such as 4G and 5G to provide customers with access to high-speed internet connectivity. Airtel's success is rooted in its customer-centric approach, which has allowed it to adapt to the digital age seamlessly. In addition to traditional telecom services, Airtel has ventured into the digital realm, offering services like Airtel Payments Bank and Airtel Xstream, catering to customers' evolving needs.

Beyond its business endeavors, Airtel is actively involved in corporate social responsibility initiatives, contributing to education, healthcare, and environmental sustainability. The company has also strategically partnered with leading technology firms to enhance its service portfolio and stay competitive in the ever-changing telecom landscape. Airtel's unwavering commitment to delivering high-quality, reliable services, coupled with its relentless pursuit of innovation, has firmly established it as a telecom powerhouse, shaping the telecommunications landscape both in India and around the world.

## **HISTORY OF HTML:**

**HTML** stands for **Hyper Text Markup Language**.

- It is used to share the information over the internet.
- HTML is developed by Tim Berners-Lee in 1991. But officially in 1993.
- The First version of HTML consists of “18 tags”
- HTML follows certain rules and regulations setup by “ISO”.
- International Organization for standardization is set of rules and regulation are present in ‘SGML’ document.

## **Versions of HTML**

- **HTML-1** version in the year 1993.
- **Html-2** version in the year 1995.
- **HTML-3.02** version in the year 1997.
- **HTML-4.1** version in the year 1999.
- **HTML-5** version in the year 2014.

## **Features of HTML**

- It is easy to Learn.
- It is a tag based language.
- HTML is supported by multiple browsers.
- First web browser is Netscape navigation which was developed by the “Mosaic”.
- It is a portable language.
- **WORA** stands for ‘write once run anywhere’

## **Limitation of HTML**

- HTML has less designing capabilities.
- It is dependent on other technology such as CSS in order to develop well designed Webpages.
- HTML has no programming capabilities.
- Using HTML and CSS we can develop only static Web page.
- In order to write the HTML code required an editor such as VS Code, Notepad, Eclipse.
- In order to execute the HTML code we required Web browsers. Like Chrome, Firefox, edge, Opera Safari .

## **CSS**

- CSS stands for Cascading Style Sheets.
- It was developed by W3C to add stylings to the HTML elements.
- W3C stands for World Wide Web.com

### **Versions of CSS:**

- CSS-1 (level-1) in the year 1996.
- CSS-2 (level-2) in the year 1998.
- CSS-3 (level-3) in the year 1999.

### **Why do we required CSS ?**

- Since HTML has less designing capabilities we cannot create well designed or most appealing Websites.
- Using HTML we cannot add style, animation and transitions to the Webpage.
- Therefore we require CSS to create well designed Webpages.

### **Advantages of CSS**

- It allows to add styles, animation and various effects to the Webpage.
- It allows us to develop the Webpage rapidly. It is also known as RAD ( rapid application Developer).
- It allows us to separate from formatting develop page to the presentation of Webpage.
- It allows to create well designed Websites.

**Limitations of CSS**

- Using CSS we can perform static styles for the Webpages.
- In order to create dynamic styling for the Websites. We must make use of scripting language such as JavaScript and Libraries of JavaScript.

**Types of CSS:**

1. Inline CSS
2. Internal CSS
3. External CSS
4. Default Browser CSS

**Inline CSS:**

Defining all the CSS properties within the style attribute inside the opening of the tag is referred to as Inline CSS.

**Internal CSS:**

Defining all the CSS properties within <style> inside the HTML document is referred to as Internal CSS.

**External CSS:**

Defining all the CSS properties within as external Script or File with an extension CSS is referred to as External CSS.

- In order to link external CSS file within the HTML document we must use of <link>.
- The value for the 'ref' attribute should be 'stylesheet'.

## **Conclusion**

In conclusion, the development of the AIRTEL CLONE website using only HTML and CSS highlights the enduring significance and versatility of these fundamental web technologies. This project emphasizes the power of simplicity and the skillful utilization of HTML for structuring content and CSS for styling to recreate the website's visual elements and layout.

This approach underscores the importance of attention to detail in design and the mastery of these essential web technologies. In summary, the successful creation of the AS Academic Projects website using HTML and CSS showcases the foundational importance of these technologies in web development and their capability to replicate a website's design and layout with precision.
